

Test under real conditions – VISULOX Proof of Concept in your own environment

With VISULOX being so modular and implemented according to your requirements, its advantages and efficiency can best be demonstrated in a real-world application. In order to support you in your decision-making process, we would therefore be pleased to offer you a Proof of Concept (PoC) in your own environment.

On the one hand, this provides the opportunity for VISULOX to be tested by your employees and partners and, on the other hand, your specific requirements can be tested in reality. This approach allows you to make a decision after the PoC phase based on your experiences.

A PoC of VISULOX encompasses several steps, which usually take a total of 3 days until the test phase begins:

- ✓ Workshop for the definition of goals and the customer side
- ✓ Installation and configuration
- ✓ Briefing and handover
- ✓ Test
- ✓ Final workshop with comparison of goals and results

During the definition phase, a workshop is held in which your goals are recorded and their feasibility is evaluated. It is defined which users and partners will be involved in the PoC and which applications and access rules will be applied. We create a list of things that need to be provided with the start of the installation. This usually includes systems (virtual, physical), IP addresses, names, firewall rules, access to user information and applications, and network access. Also topics like redundancy, integration of 2-factor-authentication, setting up an audit server or integration of your mail system for sending messages are possible, and just have to be defined in advance.

After passing a functional test, the system will be handed over with a briefing to your operations team for it to be tested for a period of about 4 weeks. During this period, our support desk will be at your disposal if any assistance is required.

At the end of the test period, we will hold a final meeting with you to discuss the results of the PoC and monitor the achievement of goals, if any, that have been defined.

A beneficial feature is also that the system setup can seamlessly continue to be operated actively by adding a final key - or all data obtained is deleted. The decision including the experience made is then completely in your hands - and if the defined goals to be achieved and jointly defined goals cannot be achieved, the POC will not be charged.

Test your specific requirements for VISULOX directly in your environment

We set up everything and instruct your team, which can then test VISULOX in depth for about 4 weeks

A proof of concept allows you to make a decision based on real-world application
